

# R/qlt2

high-dimensional data and multi-parent populations

# 21 years of R/qtl

# Intercross

# Good things

- ▶ efficient handling of missing genotypes
- ▶ diagnostics and data visualization
- ▶ fit and exploration of multiple-QTL models
- ▶ quite comprehensive
- ▶ quite flexible

# Why work on software?

- ▶ to be useful
- ▶ makes our own analyses easier
- ▶ platform for implementing new methods
- ▶ has led to many collaborations

# Bad things

- ▶ some really bloated code
- ▶ hard to maintain
- ▶ many inconsistencies in the user interface
- ▶ largely restricted to two-parent crosses

# What's changed in 20 years?

- ▶ Genome sequence
- ▶ Larger crosses
- ▶ Denser SNP genotypes
- ▶ Gene expression and other omics data
- ▶ Multi-parent populations (MPPs)
- ▶ But still hard to find genes underneath QTL

# Improving precision

- ▶ more recombinations
- ▶ more individuals
- ▶ more precise phenotype
- ▶ lower-level phenotypes
  - transcripts, proteins, metabolites

# HS/DO

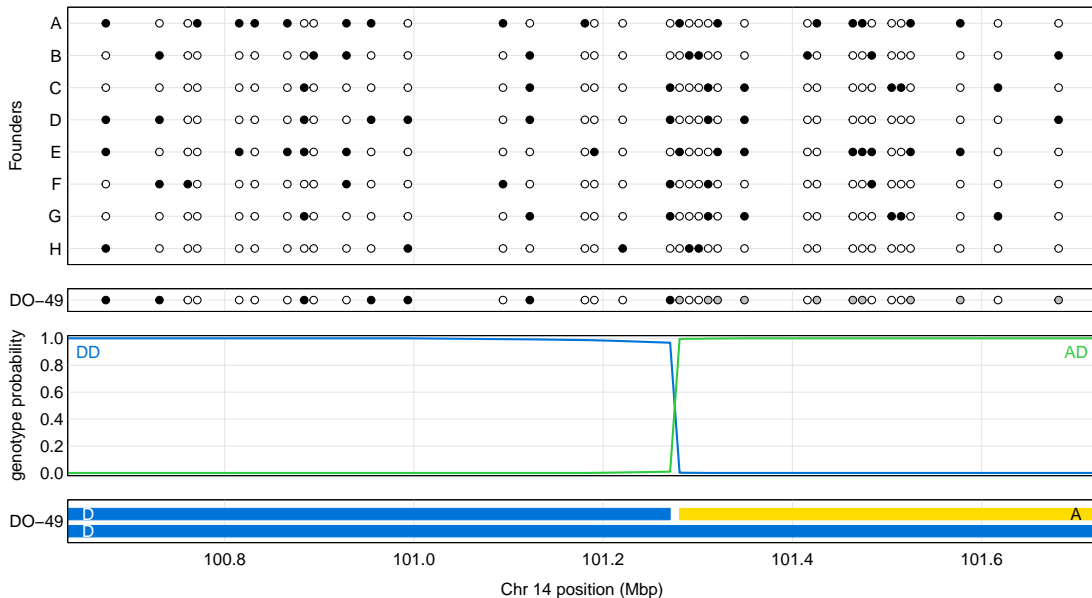

- ▶ High-density genotypes
- ▶ High-dimensional phenotypes
- ▶ Multi-parent populations
- ▶ Linear mixed models

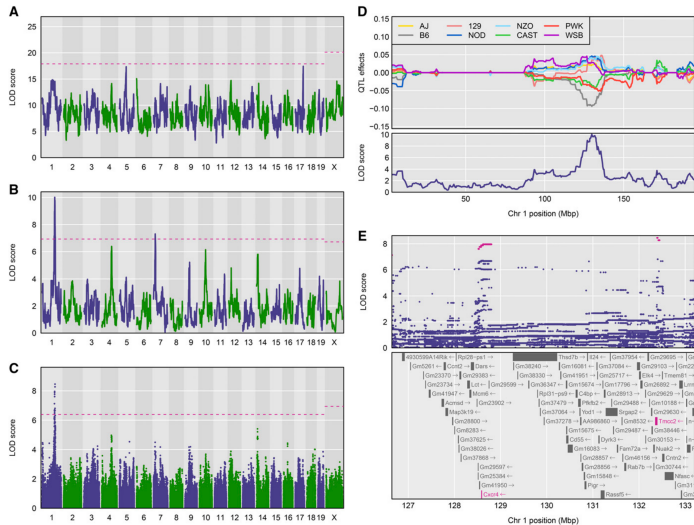

# QTL mapping in MPPs

- ▶ Data diagnostics/cleaning
- ▶ Genome reconstruction
- ▶ QTL analysis
- ▶ Visualization/exploration of results

# Genome reconstruction

# QTL mapping in MPPs

## R/qt12: Let's not make the same mistakes

- ▶ C++ and Rcpp
- ▶ Roxygen2 for documentation
- ▶ Unit tests
- ▶ A single “switch” for cross type

## R/qt12: Let's not make the same mistakes

- ▶ C++ and Rcpp
- ▶ Roxygen2 for documentation
- ▶ Unit tests
- ▶ A single “switch” for cross type
- ▶ Yet another data input format
- ▶ Flatter data structures, but still complex
